History AutoCAD (originally AutoCAD Drafting System) was developed by Chuck Martin, and was initially created in 1981 as a software package specifically for use in the drafting industry. Marketing For many years, the company's logo was a snake biting its own tail, often shown on a U.S. five-dollar bill. The bill, introduced in 1966, was replaced by a new series of bills featuring the younger version of the logo. The logo featured a form of the three-letter abbreviation of AutoCAD's name. Although in subsequent years, the logo has been used in different variations, the original logo, version 1.0, continues to be used, often modified to include the year of the release. In 1996, the name was changed from AutoCAD, Inc. to Autodesk, Inc., to reflect the company's new focus on software development, and not just on the manufacture of drawing equipment. It was also in the early 1990s that the software was made available to the public, first on a diskette and later on a CD-ROM (which is still available on the company's website), as the first Windows-based PC-oriented software. The company logo, initially a black three-headed dog with a lightning bolt (an "Auto" in the middle), was developed by the former CEO Ken LaValle and designer Gary Urmeneta. The dog was used for almost ten years on the software's packaging and website, until 2007. The current corporate logo features the AutoCAD logo in a blue monochromatic field, with the motto "CAD through understanding" and the "A+" certification logo. Early software The first version of AutoCAD was for the Apple II computer. The first version of the application, called AutoCAD Drafting System, was released in 1982. It was initially developed for the Apple II computer as part of the Apple Softworks, Inc. (ASI) publishing system for the Apple II computer. The name of the application was later shortened to AutoCAD. ASI purchased Macromedia in 1985 and moved AutoCAD to Macromedia's Flash Builder. However, ASI was acquired by Autodesk in 1999. When Autodesk purchased ASI, its first releases of AutoCAD for the Mac were entirely new versions of AutoCAD for the Macintosh computer, with the same interface as the original,

AutoCAD LT and AutoCAD LT Classic AutoCAD LT is a commercial, feature-oriented replacement of the original AutoCAD drawing program. When first released, AutoCAD LT was targeted for the business sector. However, AutoCAD LT Classic, or "LT Classic", is available for home use at no cost. LT Classic (and LT for Mac) are the predecessor products to Autodesk Fusion 360, Autodesk Enterprise Architect, Autodesk 3D Cloud Services, Autodesk Architectural Desktop and Autodesk Revit. AutoCAD LT Classic was released in 2003 and AutoCAD LT 2009 in 2004. AutoCAD LT Classic can import and export DWG, DXF and PLY. A large number of 3D and 2D CAD features are included. LT Classic also includes many features that are not available in LT, including the ability to import CAD models from and export CAD models to UGN, a file format used in the building industry. AutoCAD LT Classic also provides cloud support for Microsoft Azure, VMware vSphere, Amazon EC2, and Azure Cloud. AutoCAD LT Classic supports Microsoft Windows, Microsoft Windows Server, Apple OS X and Linux operating systems. Autodesk Authorware Autodesk Authorware (Aww) is a web service that allows users to create content for websites, intranets, and extranets using AutoCAD, AutoCAD LT and other AutoCAD-based applications. Aww provides HTML, Flash, and Java technologies to build web-based content. XML and Dynamic Linking Dynamic Linking is an XML schema language that defines how XML files can be used by AutoCAD software. These XML files have the.dxd file extension and can be processed by an XML processor before being inserted into AutoCAD. A widely used example is the XLSML format, used to process a spreadsheet such as Excel to be used with AutoCAD. The format can be adapted to other formats such as DWG. It can be used to parse files that are available to be used with AutoCAD. The following XML schemas are used to add a feature to AutoCAD: ACSXML: A simple XML file that describes the data the web server should send to AutoCAD to display a web page. DATS: Describes the template to use when calling an API. DATSML: a1d647c40b
