is the native file format that Autodesk supports. All of its graphic products use this format. In Windows Vista and later, AutoCAD Crack Mac 2010 and later, and AutoCAD LT 2010 and later, the file format is also natively supported for natively using the RTF format. The product distinguishes between "metafiles" and "bitmap" files. A metafile contains information such as the coordinate system and object properties that may be described in the file. A bitmap file contains only information about the geometric objects, such as their dimensions and coordinates. A bitmap file is similar to a "smart" file. Metafiles are generally created when one uses some of the editor tools or when one pastes information from other sources into a drawing.
