The family of my husband was asked by the children to help our tutor in teaching to a class of students who were all aged between 11-16. At first they were quite shy, but slowly the children became more comfortable with the adults. The children were in a sports area, a game room, and a classroom. My husband, his younger brother, and the tutor went to the sports area. My husband demonstrated how to play football and volleyball. This is the first time he has tried these sports, and he had a blast playing with the children. The children were so interested in my husband, and his brother. OpenSSL has been upgraded from 1.0.0e to 1.0.1, and this server is being updated to 1.0.1. My question is: will this cause a problem? Will TLS be broken when upgrading to 1.0.1? A: TL;DR: No, it's not likely to break anything, and no, it's not an issue to upgrade from 0.9.8e to 1.0.1. The new OpenSSL does not introduce any bugs.
