AutoCAD is used by professionals and students from architecture to engineering, construction and manufacturing. The suite includes a 2D drafting application and a full-featured 2D/3D CAD program. AutoCAD is also used for documentation, sign making and sign construction. AutoCAD is based on a 3D model that is designed to be enhanced by 3D geometry that is inserted into the 2D or 3D object. It allows a user to add additional dimension, and to move and orient the geometry. The system allows users to control the perspective, size and depth of 2D or 3D objects. When a drawing is printed, the sizes are adjusted based on the size of the paper. Development of AutoCAD was started at Palo Alto Research Center, and the first public demonstration of the system was in 1983, when David Taylor and Don Showers first showed a demonstration of the system in Palo Alto at a local user group. In 1984, Taylor and Showers were joined by Tom Beddoes, as co-inventors on the AutoCAD patent. In 1985, the Palo Alto Research Center was reorganized and became the Palo Alto Research Center in Santa Cruz, California. The Palo Alto Research Center continued to develop AutoCAD in Santa Cruz until March 2001, when Autodesk bought the AutoCAD product and intellectual property from PARC. In August 2002, the Palo Alto Research Center was disbanded. The Autodesk AutoCAD 2020 Software Suite is an enhanced version of AutoCAD 2009. The new software is available on Microsoft Windows 7, Vista, XP and 2000, and Mac OS X 10.4 and above. AutoCAD 2020 is also available for the mobile devices iPad, iPhone, Android, and BlackBerry. AutoCAD is listed as the sixth most popular software application used by architects, according to the 2011 Architecture Billings Index, published by the American Institute of Architects (AIA). It is the top CAD software used in the architectural community. AutoCAD is used by architecture, landscape architecture, interior design, engineering, contracting, construction and drafting firms. In July 2004, there were 6.4 million AutoCAD users. By 2008, it was 9 million. AutoCAD is also used by students taking construction technology or drafting classes in technical colleges and universities. AutoCAD is one of the most popular CAD software applications in the world. In 2010, there were 9

Free CADs have been developed by different entities, such as MIT's open source CAD of the year, ArchiCAD, the Geometry Center (formerly founded by John Walker and now developed by L-3) which also developed the 3D drawing software 3DS, later also CADworld. Visual LISP AutoLISP is a LISP implementation for AutoCAD. It is one of the first scripting languages to be embedded in a mainstream application. It is the precursor to Visual LISP, and is used by users to create AutoLISP files which are then interpreted by AutoLISP. AutoLISP also includes programming language features for automation and database development. AutoLISP files are often in the DLL (Dynamic Link Library) format. AutoCAD 2.0 introduced a new scripting engine, for developers who wished to use AutoLISP instead of the original system. The new engine is accessible to users via an AutoLISP Control Panel (ACP) rather than the original engine requiring the workbench. The ACP is a set of commands and syntax supported via AutoLISP that can be used to program AutoCAD and AutoCAD LT commands and procedures. AutoCAD 2.0 introduced the MxD and MxP to complement the original scripting for complex tasks. MxD and MxP are a highly object-oriented scripting system that implement data objects for the user to customize drawings. It includes a large number of ready-made objects such as surface objects, lines, text boxes, dimensions, coordinate systems, views, layers, annotation, selection tools, and other drawing commands. AutoCAD-based application AutoCAD LT is a discontinued AutoCAD counterpart, which allowed users to create and modify drawings in the same way as AutoCAD. It uses the standard Windows graphical user interface and its programming interface is based on that of AutoCAD. In 1995, the Geometry Center developed the first application that allows users to develop AutoCAD users like those in the Architecture and Engineering communities. Architectural CAD software was normally expensive and unsuitable for use in the field. This new software, 3DS, was designed specifically for architectural and engineering users. 3DS allows users to combine AutoCAD and other CAD applications such as Revit or Grasshopper. 3DS also allows users to create presentations, animations, and surveys. The applications offer a CAD- a1d647c40b
