Student Progress is an educational application that aims to help any tutor or teacher with keeping an eye on the progress of each one of his students. Through the use of Excel documents, this application helps anyone seeking to have all student information in one single place. At first, one can conduct a search by using the top search bar. Just the thought of having to make a comprehensive Excel document for each student might make some people cringe. But if you have the time for it and if you want to organize all this data effectively, using Student Progress might be your solution. Everything is in place, so you don't have to worry about the workflow as it's all in one place. As mentioned earlier, the Excel file is the only data source this application relies on. So basically, you'll need an Excel template that's always ready to go. This application won't force anyone to follow any specific workflow. In fact, the person in charge of this software only needs to keep the data source up to date. Of course, this does mean that all the information in the document must be updated from time to time, so if you don't want to make that effort, you can always opt to have the file ready to go. After you've updated everything, you can save the file and that's it. The application will take care of the rest. If you ever need to edit any information about the current student, you'll need to open the file to make any changes. Saving it again will be enough for Student Progress to pick up those changes. Besides, the file will be updated by itself if you haven't updated it from the start. Student Progress requires Excel to run, so if you're looking for something that's more suitable for those of you who don't have it on hand, you might want to go with a different application. What I like the most about Student Progress is that it's completely free. It's not a trial or a version, it's the real thing. Because of this, it won't eat up any of your time, money, or patience. If you're looking for an application that will save you the effort of making numerous Excel files, you might want to have a look at Student Progress, an application that will be a big help to anyone seeking to keep a track of the development process of each student. It does not require any registration or additional fees and it doesn't have any limits either. All in all, it's a useful tool that I recommend highly. Student Progress was

Send us an email at For all the attention President Obama's team paid to beating Mitt Romney in Michigan last week, the president might have even missed his own pre-debate presser last week on what one aide described as "an important message." That's because the president not only didn't mention Ann Romney in his remarks, he also didn't mention the same little-discussed issue that has defined the campaign: the 47 percent of Americans who won't vote for the president. At the White House, Obama's communications shop told reporters he was having trouble fielding questions about the crowd size at his rally in San Diego the night before. But the president and his aides appear to have been oblivious to how the issue was shaping up as a third Romney/Ryan debate loomed — or even what was stirring, according to sources. "It was a missed opportunity to make something happen," one Obama campaign insider said. "This is his moment, and it's not right now." Team Obama's struggle to make its own theme stand, either due to personal crisis or inexperience, has also kept this election from coalescing into one positive, enduring image. After months of negative ads and veiled references to the candidate's penchant for bloated bank accounts, as well as a constant reminder of Romney's alleged out-of-touch wife, Obama's speeches and ad campaigns have managed to keep the president likeable. Obama is reaping the dividends of running one of the more likable and effective
