AutoCAD is a Windows desktop based graphics-intensive CAD/Drafting software application developed by Autodesk. This product is released as three versions, each having different operating system platforms. AutoCAD: AutoCAD LT (formerly AutoCAD 500), is designed for do-it-yourself (DIY) and general purpose engineering drawing needs. AutoCAD LT runs on Windows, Mac, and Linux operating systems. For \$249, it is priced competitively with most other CAD/Drafting apps, and is popular because it is bundled with other AutoCAD-related software. AutoCAD Professional (formerly AutoCAD Pro), is designed for mechanical and architectural design, and general purpose engineering drawing needs. AutoCAD Pro runs on Windows and Mac operating systems. It is a commercial, graphics-intensive, CAD/Drafting software application with much more capability than AutoCAD LT. The user interface is the same in AutoCAD LT and AutoCAD Pro, but the user interface features, functionality, and capabilities are slightly different. The license costs \$1,299, and is priced competitively with other CAD/Drafting apps. AutoCAD Pro is bundled with 3D software. AutoCAD is now the only Windows-based, cross-platform CAD application. However, as of version 2016 (currently version 2019), Autodesk is releasing a new, Windows-based, cross-

I have a simple.bat file which opens a.vbs file: Start "" C:\Program Files\APP.EXE arg1 arg2 The program simply passes the arguments to a Winform and starts the application. Is there a simple way to get my.bat to also pass a file to the.vbs application as arguments? I've tried using Start "" C:\Program Files\APP.EXE "arg1" "arg2" which I got from this question on superuser.com. But this results in the standard "Program or folder not found" error. A: You will need to launch the.vbs file and send the arguments to it, via its command-line. It is actually a good idea to launch the.vbs file from within a separate.bat file. Just make sure that the.bat file that starts the.vbs file has a command line of: "C:\Program Files\APP.EXE" arg1 arg2 The "C:\Program Files\APP.EXE" is the command to launch the.vbs file, and arg1 and arg2 are the arguments to be passed to that.vbs file. Jay McConville said he remembers what it was like to be a regular kid in school. "It was a very mellow time," he said. The 62-year-old remembered it well, because as a student, he said the excitement of opening a new door was enough to blow away the anxieties and anger of the world. But as he approached the door of elementary school, the exit door of adulthood, he looked out and saw a lot of students out of school. "I remember thinking 'I wonder why they're out?' " he said. He entered the school and walked into the gym, where he found the team he was going to be on waiting. McConville and his classmates would go on to become school reformers, fighters against poverty and champions of the poor. They became the first students to win school integration in New York state and changed the way schools thought about America's poor. When John Ritter was walking home from school in Lincoln Park in the late 1950s, he said the street reminded him of the late 1800s when he was growing up in Manhattan. "It was quite desolate and I was always walking home alone," he said. "I wasn't sure if I'd be able to get home, but I always got home." But things changed for Ritter when he found a group of people who were more than just poverty's victims. "It was one of those 'wow' moments," he said. "It was a simple concept that I think resonates with a lot of people. It's not that poverty's bad. It's that poverty hurts everyone." The Chicago school reformers were the first to say that schools shouldn't simply teach students to pass tests, but to learn the most important lesson of all -- empathy. Seth Andrews, a documentary filmmaker who helped make the documentary "The First to Fight," said empathy means caring for others. "Being born in a working class family and having no money, you didn't see the wealthy having a lot, and I felt like I was fortunate that way," he said. "I mean, there was the concept of poverty, but there was very little in the way of government programs
