According to the 2011 J.D. Power Autodesk Consumer Study, the brand ranked number one in overall satisfaction with the desktop version, while the 2013 Autodesk Computer User Satisfaction Study found that AutoCAD ranked highest among all categories in overall customer satisfaction with AutoCAD users. Last year, AutoCAD and related software products accounted for over 40% of Autodesk's total revenue. AutoCAD History and Usage AutoCAD was originally written and developed by George Hartley at British computing giant "DEC" (Digital Equipment Corporation) where he was the principal AutoCAD developer. Hartley wrote AutoCAD's first release in February 1983 as an application for an internal DEC-10 mainframe computer running the CP-V operating system. The application was developed using the MUMPS programming language for numerical processing, and it was the first major CAD application to be written in the language. AutoCAD was the first desktop application available to be used on internal DEC-10 mainframes, providing the first CAD software that allowed a single person to work on all phases of a design or project, from the initial idea to design, drafting, layout, and engineering. Autodesk's web page on George Hartley notes that "When the application was released in 1983, this became the first CAD software ever to allow a single person to work on all phases of a design or project from idea to prototype. This single person work paradigm was a revolutionary concept at the time, and the capability helped put CAD on the map." The application was developed on DEC's MicroSystems Research Center for the new CP-V operating system, which was released in December 1983. CP-V was one of the first operating systems to support an integrated graphics console, where all of the user interface elements could be viewed and worked simultaneously. CP-V was based on MUMPS, and Autodesk wrote the user interface (window and toolbars) using this language for the first time. CP-V was first released in June 1983. By the time CP-V was released, DEC had already released its second major operating system, CP-20, but the first few hundred mainframe computers with CP-V were outfitted with AutoCAD. The
