ABC. For some explanations and example, let's consider. This is due to the fact that current and voltage are always \propto . EAMCET 2020 Exam Syllabus Download : All Subjects AP EAMCET score card for Physics, Chemistry and Mathematics are now \propto . EAMCET Physics Formulas 99.pdf

The invention relates to a hydraulic clamping and screwing device according to the preamble of claim 1. A clamping and screwing device of this type is known, for example, from U.S. Pat. No. 5,097,545. This clamping and screwing device is composed of a cylindrical main drive shaft which serves to drive the barrel. The main drive shaft is supported on the backing plate through balls and a locking mechanism. Clamping elements, such as tubes or springs, are arranged on a support plate. They are mounted onto the main drive shaft and can be pressed into a clamping groove of the barrel by means of the main drive shaft. The clamping and screwing device is intended to transfer forces from the main drive shaft, through the clamping elements, to the barrel. In particular, the transfer of forces takes place along a first, vertical force transfer line between the clamping elements arranged on the support plate and the clamping groove, and along a second, horizontal force transfer line between the support plate and the barrel. This clamping and screwing device has the disadvantage that the force and the position of the clamping elements can be adjusted only from the front side or the rear side, that is, they cannot be adjusted from both sides. Furthermore, when the screwing device is to be used in a motor vehicle, in particular in the lift platform of a fork lift truck, the support plate is exposed to heavy vibrations, in particular if the lift platform is lifted. This can lead to premature failure of the components and a shortened service life. Furthermore, on vehicles such as fork lift trucks, the clamping elements can only be adjusted by machine tools. The object of the present invention is to produce a clamping and screwing device, which in particular consists of few components and thus is easy to manufacture and install. This object is achieved by a clamping and screwing device according to the preamble of claim 1. Advantageous developments of the invention are set forth in the subclaims. The clamping and screwing device according to the invention comprises a drive shaft, 0cc13bf012

Theoretical investigations on the valence tautomerism of 1,4-dimethyl-3-phenyl-1,2,3,4-diazatetracyclo-[4.4.0.0(2,6)0(5,10)]dec-2-ene. The valence tautomeric conformation of 1,4-dimethyl-3-phenyl-1,2,3,4-diazatetracyclo-[4.4.0.0(2,6)0(5,10)]dec-2-ene (DPMD), in the gas phase, aqueous solution, and trifluoroacetic acid solution has been investigated by density functional theory (DFT) and ab initio HF and MP2 methods with 6-31+G(d,p) basis set. The gas-phase geometrical parameters of all the conformers have been obtained theoretically and compared to those deduced from the X-ray crystal structure. In the gas phase, the most stable valence tautomer of DPMD is a 4H,5H,5H-diazatetracene-8,7,12,11-tetraenylidene (
