Part 2, published in the December issue of AHRQ Health Affairs, describes a randomized, controlled trial, conducted by the US Food and Drug Administration (FDA), which found that rivastigmine transdermal system was more effective than placebo in improving cognition and was better tolerated in patients with Alzheimer's disease. In this second article, Part 2, an analysis of the rivastigmine transdermal system's efficacy and safety in Alzheimer's disease. What is the rivastigmine transdermal system? Rivastigmine transdermal system is an innovative treatment for Alzheimer's disease, which allows a non-oral active agent to remain in contact with the skin for a greater length of time than is possible with other transdermal drug delivery systems. It
