WiFi Headpone Crack With Registration Code For PC Latest

WiFi Headpone Crack + Full Version

WiFi Headpone is a useful and reliable server application that makes an Android device act like a wireless headphone. The client device must be connected to a WiFi network for the server to work. The main functionality of the application is to make your phone and your laptop sound like you are wearing a wireless headphone, so as to keep the sound from disturbing others in the room. You can make a connection from your phone to a stereo, television or any other sound source and press the appropriate button to send the sound through to your phone. You can even use your smartphone to stream audio from the phone to your TV, set top box, radio or other stereo or sound device.The latest version supports the new Google Chromecast streaming device also, which means that you can even stream your media (Streaming videos, music, etc.) through your phone to a TV via Chromecast. Here are some more details: WiFi Headpone is a useful and reliable server application that makes an Android device act like a wireless headphone.
