This allows to have an analysis job that runs automatically each time a Jenkins build is triggered. In order to understand which are the metrics the plugin gathers, in the SonarQube dashboard, on the Coverage page, I have to click on the Coverage table, and there's nothing there. The metrics are not gathered. How can I get the metrics, and send them to the server, by using Jenkins? In the same step, how can I generate the results? I would like to have a table like this, but with metrics instead of the 0% and 100% numbers: A: If you use the web interface, you can directly access the Web Coverage page: Here, you can configure your target coverage by selecting "Capture coverage at build time": You can also ca3bfb1094
