teaching is implemented quickly, efficiently, and effectively, from beginner to advanced, because it is built on the foundations of generative music-making, rather than a prescribed methodology. There is no 'correct' way to learn resonance because it is transferred directly to emotional movement through music, therefore, teaching methods are largely improvised, as it were, based upon the needs and interests of the students. By accessing and exploiting the innate ways in which humans can connect with music, resonance works through the logical and emotional elements of music, without reliance on professional training, complex theory or specialized equipment. A resonance reference is established, as a visual or physical representation of the frequencies used in the program. Typically, the resonance reference will be a 17"x17" sheet of paper that has been hand cut-shaped into a playing board for resonance. The sheet of paper is called a 'phasing' and is used to create a precise playing field for the learning process. Once this is set up, the student is free to explore the basics of using resonance through the paper, until they are ready to move on to practicing music. For beginning students, who may still be learning to read music, a resonance reference will often not be necessary as it is moved away from the music during practice. For advanced students, the resonance reference may be incorporated with the music throughout the program. Depending on the sophistication of the student, the reference can take many different forms from simple shapes such as squares and diamonds to unique and/or complex shapes. As a mind and body-training tool, the work is constantly evolving as the student grows, so the shape is constantly changing. The resonance reference is used for systematically practicing musical concepts. It establishes a visual baseline for learning -- what if you wanted to play the note F7 instead of F4, or to play two notes out of phase? In order to hear the note F4 being played out of phase with F7, one must first begin to learn the right hand and arm to interact with the resonance reference. The resonance reference provides a simple and concrete platform to

establish the foundation for understanding music, as opposed to simply needing to know the notes and notes moving. When the resonance reference is played, musical concepts can be heard from two perspectives, because it is a highly interactive physical experience. Because the notes and concepts are held in the resonance reference the student is using the violin as an extension of the hand, to provide a mental anchor to play the notes. Resonance is an effective tool for teaching beginners
