Help The built-in Help System in AutoCAD is essentially an online dictionary with a user interface. Help can be accessed from the "Help" menu, or with the F1 key. The latter method provides a longer list of options, including the ability to search help for a specific topic. Rampant Software has a paid add-on called the Help Center that provides a more traditional interface, with additional information such as content, bookmarks, printed references and other tools. AutoCAD 2014 includes a "Tech Support Assistant" tool, which provides helpful tips and hints for work on a single user interface screen, or in cases where a designer encounters problems. This is useful for beginners or for regular users encountering similar problems. Bug Reports AutoCAD supports reporting of bugs through its user interface, or by email. There is no method for external software or web applications to report bugs, or to submit

feature requests. User Interface The user interface of AutoCAD is presented as a 2D wire-frame diagram with labeled and numbered blocks. Text is inserted using special characters. The symbol dictionary is automatically updated at run time, based on the version number. The mouse cursor (or other drawing-editing tools) are represented by a 'wire-frame' cursor image. In most applications, when the cursor is over an object, the cursor image can be moved (i.e. there is a direction key), a tooltip appears when the cursor moves over a symbol, or an icon appears when the cursor is over a button or menu item. Mouse clicks are labeled, and can be configured to trigger an operation. Clicking in the wire frame cursor (while the cursor is inside the drawing area, and not over a block) causes that block to be selected. Menu Menu options may be grouped (using a "menu bar"), and are highlighted if the user is currently viewing a particular menu. They appear in a horizontal bar at the top of the screen, with the user's current menu highlighted. Menu items are indicated by a single-character menu name, for example, M for the current menu. Menu name groups (if any) appear under the menu name. Menu items can have shortcuts assigned, which means that the user can use the keyboard to make a selection. In AutoCAD, menus are not customizable. Icon A variety of symbols can be inserted into ca3bfb1094
