Deep Freeze 7.61.020.4320 Serial Number. The incidence of postpartum hemorrhage with oxytocin use, parity, and diabetes is not altered by addition of tranexamic acid to conventional oxytocin used for labor induction: a randomized controlled trial. To evaluate the effect of tranexamic acid administration on the incidence of postpartum hemorrhage (PPH) and on the incidence of blood loss > 1500 mL (M2 L2) during the first 3 days after delivery in women who received oxytocin for labor induction and in women who received oxytocin for pain relief. The study included 90 women. The women were randomly assigned to receive either oxytocin alone (n = 45) or oxytocin and tranexamic acid (n = 45). Oxytocin was administered intravenously for 3 hours and then as a continuous intravenous infusion for 2 hours. Tranexamic acid was given at the time of oxytocin infusion for 3 consecutive days postpartum (1000 mg intravenously in the first 8 hours and then 500 mg intravenously every 8 hours during the following 24 hours). PPH was defined as blood loss > or = 1500 mL. The incidence of PPH (21.8% vs 16.7%) was not altered by the addition of tranexamic acid. The incidence of M2 L2 was also similar in the two groups (5.5% vs 3.3%). The mean blood loss was lower in the group with

I was wondering what the best practice is regarding the default size of font-size in h1/h2/h3/etc classes. If you are comfortable with the browser styling, how small (x-small) do you want the text to be? I've seen some design elements (notably Amazon) which look like this: My thought was "Hey, this might be an effect of the browser, but to me, it just looks odd. If I were to try this in one of my current projects, it would just look like really dense text." I know that there is an element in HTML called "font-size" which is supposed to be the "minimum font size" that is recommended, but that is just to encourage proper sizing of the elements. The only thing I'm slightly torn about is "why"? Should one just go with the flow and default and assume that if there is a way to be comfortable that there is a way to be too comfortable? How about when using a table structure for something like grids and rows? A: This is a question that I thought about a couple of times, but never definitively answered. I think the answer is Yes, but there's a caveat. In my experience, the default page margins allow me to make all the text comfortably legible, and the default
