This improved version incorporates a new die-map for the chips that are in the area of the board that the new chips are being introduced to, allowing you to put your chips in a different configuration to maximize the sales on that part. In other words, if you have been using the stock configuration of the new chips (DDR3-2400 etc), you can change your configuration to DIMM1-2400 (4GB). Disassembly is the same as the stock Mini Sales Maximizer - most of the board is removed using small pliers.Q: How to create a Python program This is a 2D game for Python. It should give you a square screen, be it 4 or 4 by 4. I have been trying to figure this out for a while. I have looked at other questions regarding this issue: How to create a grid in Python? How to make a 4x4 grid in Python? I have created a class called screen: class screen(object): def __init__(self): self.x = 0 self.y = 0
