According to the documentation, strings that look like this: "2017-10-12T09:05:03-05:00" "2017-10-12T09:05:03" "2017-10-12T09:05:03-05:00 (ISO8601)" are equivalent to Timestamps and can be converted directly to them. What about this one? "12/10/2017 9:05" I get a type error complaining that it's not convertible to {:datetime,time} which is probably not the right thing to be doing anyway. Is there a better way to convert a string of this type? Or should I just use :datetime instead of :time? A: String.downcase("2017-10-12T09:05:03-05:00 (ISO8601)") |> Date.from_iso8601 |> Date.to_string #=> "2017-10-12T09:05:03Z" [The clinical application of the method of delayed autoradiography in the diagnosis of brain tumors]. The method of autoradiography was used to study central and lateral hemispheres of the brain. Neopallial, neostriatal, neocortical and limbic regions were investigated. c6a93da74d
